Investment Information

Strategy Description

- Investment objective is to maximize long-term capital appreciation while mitigating risk relative to the benchmark over multi-year periods
- · Diversified, quality-oriented portfolios managed with a long-term time horizon
- · Contrarian approach seeks to identify companies with low market expectations and a high probability of fundamental improvement that are trading with attractive upside potential and limited downside risk
- · Portfolios consist of companies that we believe can create shareholder value and possess quality management teams, attractive industry dynamics and strong or improving financials
- · Fundamental, bottom-up approach to security selection, typically investing in stocks within the market capitalization range of the Russell 2000 Index at the time of purchase

Experienced Team

The research team consists of seven individuals averaging over 25 years of industry experience. The portfolio managers have managed the strategy since inception in 2002.

A majority of the senior members of Aristotle Boston's research team are equity partners. The firm's ownership structure is intended to provide organizational stability and align employee interests with those of clients.

Long-Term Approach

Our process is based on in-depth company research and incorporates a long-term perspective with the goal of participating in the long-term appreciation and growth of each investment.

We conduct bottom-up, fundamental research to identify what we believe to be quality-oriented businesses trading at meaningful discounts to our estimates of their intrinsic value.

Depth of Research

We believe the overall depth and quality of information gathered throughout our research process leads to a more robust platform upon which analysts can better assess business fundamentals and valuation.

The team typically holds 400 to 600 company meetings annually, which are vital to the understanding of company management styles and longterm business dynamics.

¹The Aristotle Small Cap Equity Composite has an inception date of November 1, 2006 at a predecessor firm. During this time, Dave Adams and Jack McPherson had primary responsibility for managing the strategy. Performance starting January 1, 2015 was achieved at Aristotte Boston.

Effective January 1, 2022, the Small Cap Equity Composite has been redefined to exclude accounts with meaningful industry-specific restrictions or substantial values-based screens hampering

implementation of the small cap strategy.

The total assets provided above represent \$1,008.8 million of Small Cap Equity, \$101.0 million of Small Cap Faith-Based and \$531.6 million of Small Cap Ex-Fossil Fuel assets. Past performance is not indicative of future results. Performance results for periods greater than one year have been annualized. Returns are presented gross and net of investment advisory fees and include the reinvestment of all income. Gross returns will be reduced by fees and other expenses that may be incurred in the management of the account. Net returns are presented net of actual investment advisory fees and after the deduction of all trading expenses. Returns are preliminary pending final account reconciliation. The Portfolio Characteristics shown are based on a representative account and exclude ETFs. Please see important disclosures at the end of this document.

The Top Ten Holdings, Market Cap Breakdown and Sector Weights shown are based on a representative portfolio within the Aristotle Small Cap Equity Composite. The Portfolio Characteristics and Risk/Return Statistics shown are based on the Aristotle Small Cap Equity Composite (Composite). Portfolio risk/return statistics and characteristics are presented gross of fees and do not include the deduction of all fees and expenses that a client or investor has paid or would have paid. Please refer to the gross and net composite returns included within to understand the overall impact of fees. The representative account was chosen since, in our view, it is the account will have these exact characteristics. The actual characteristics with respect to any particular client account will vary based on a number of factors, including but not limited to: (i) the size of the account; (ii) investment restrictions applicable to the account, if any, and (iii) market exigencies at the time of investment. You should not assume that any of the securities transactions, sectors or holdings discussed in this report are or will be profitable, or that recommendations Aristotle Capital Boston, LLC (Aristotle Boston) makes in the future will be profitable or equal the performance of the securities listed in this report. There is no assurance that any securities, sectors or industries discussed herein will be included in or excluded from an account's portfolio. Aristotle Boston reserves the right to modify its current investment strategies and techniques based on changing market dynamics or client needs. This is not a recommendation to buy or sell a particular security. Recommendations made in the last 12 months are available upon request. Past performance is not indicative of future results. All investments carry a certain degree of risk, including the possible loss of principal. Investments are also subject to political, market, currency and regulatory risks or economic developments. International investments involve special risks that may in particular cause a loss in principal, including currency fluctuation, lower liquidity, different accounting methods and economic and political systems, and higher transaction costs. These risks typically are greater in emerging markets. While Large-capitalization companies may have more stable prices than smaller, less established companies, they are still subject to equity securities risk. In addition, large-capitalization equity security prices may not rise as much as prices of equity securities of smallcapitalization companies. Securities of small- and medium-sized companies tend to have a shorter history of operations, be more volatile and less liquid. Value stocks can perform differently from the market as a whole and other types of stocks. The Russell 2000® Index measures the performance of the small cap segment of the U.S. equity universe. The Russell 2000 Index is a subset of the Russell 3000® Index, representing approximately 10% of the total market capitalization of that index. It includes approximately 2,000 of the smallest securities based on a combination of their market capitalization and current index membership. The volatility (beta) of the composite may be greater or less than the benchmark. It is not possible to invest directly in this index. **Active Share** is a measure of the percentage of stock holdings in a manager's portfolio that differ from the benchmark index. **Turnover** is the percentage of a portfolio's securities that have changed over the course of one year. (lesser of purchases or sales)/average market value. **Dividend Yield** is the ratio of a firm's dividends each year relative to its share price. **Weighted Average Market Cap** is a dollar-value measurement of the size of companies in a portfolio or index. In such a weighting scheme, an average figure is derived from the market capitalizations of each company (their market prices multiplied by the number of shares outstanding) multiplied by their weights in the portfolio or index. **Price-to-Earnings (P/E)** ratio measures a company's share price relative to its earnings per share (EPS). **Price-to-Book (P/B) Value** ratio is calculated by dividing the company's current stock price per share by its book value per share (BVPS). This calculation uses the weighted harmonic mean. **Forward EPS Growth** is the percentage increase or decrease in the next five years' earnings estimates. **Return on Equity** is the amount of net income returned as a percentage of shareholders' equity. Return on equity measures a corporation's profitability by revealing how much profit a company generates with the money shareholders have invested. **Annualized Alpha** is the measure of risk-adjusted excess return over the style index. **Standard Deviation** is a measurement of risk or variability of returns ov
